### Individual Fixtures & Continuous Rows

NOMINAL LENGTH	MIN LENGTH	MAX LENGTH

12'	11' 6"	12' 6"
16'	15' 6"	16' 8"
20'	19' 6"	20' 8"
24'	23' 6"	24' 8"

Table shows minimum and maximum field adjustable length with included telescoping end. Illumination is continuous along entire 14" telescoping section with no field cutting required.

Exact adjustment lengths are dependant on overall specified length of individual fixture or row. Detail will be noted on factory issued drawings for approval.

### EPC/EMC Locations

EPC will control entire length of individual fixtures. Individual fixtures of differing lengths will deliver the same lumens under EPC power (a 4' fixture will deliver the same total lumens over half the length of an 8' fixture). EMC controlled individual fixtures will deliver lumens per foot as originally specified, unless dimmed at time of power loss. Consult factory for EMC dimming override device.

For individual fixtures to 8' EPC/EMC will power entire fixture.

For continuous rows longer than 8' one EPC/EMC will be located in the feed section (end-left) of the row as shown below.

If two EPC/EMC's are required their default locations will be in the feed section (end-left) and last section (end-right) as below.

Custom placement of one or more EPC/EMC's must be clearly identified during ordering.

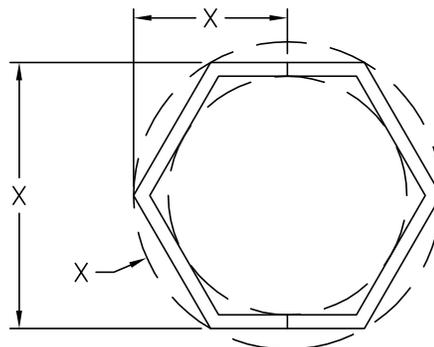

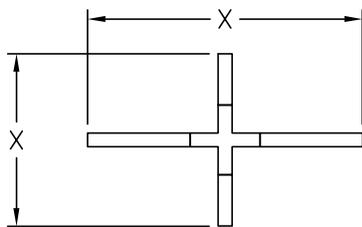

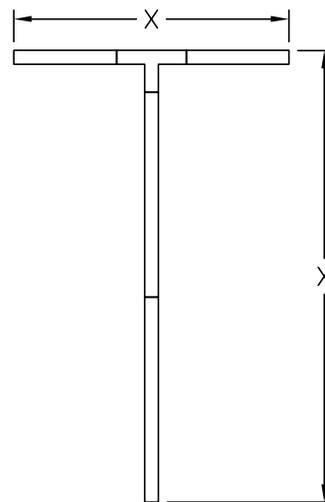

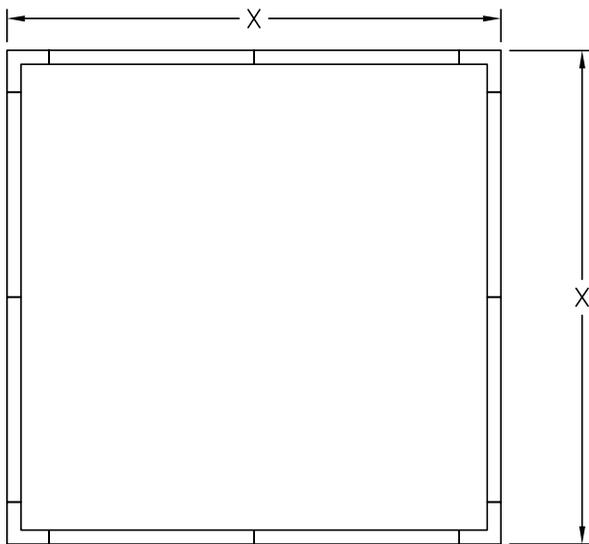

## Pattern Guide

WPPL-4/6 may be specified in patterns of virtually any configuration. All patterns and corners are continuously illuminated and joined with included aligner brackets and joining hardware. See examples below for suggestions. Day-O-Lite's custom manufacturing capabilities allow the specification of custom angled connectors to make non-square patterns possible. (See ILX example below).

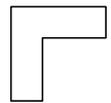

### How to Specify

1. Submit your pattern to Day-O-Lite in a dimensioned CAD file or submit a fully dimensioned PDF file.
2. If EPC/EMC or Sensors are to be included their location needs to be clearly noted.
3. Day-O-Lite will design your pattern to as close as is nominally possible given standard LED module lengths, including connectors.
4. Day-O-Lite will supply a detailed drawing for approval with final dimensions. All patterns must be approved prior to manufacture.

Day-O-Lite offers a variety of tunable white and tunable color options for a range of human centric applications and budgets. It is recommended that a recognized authority on the benefits and best practices of tunable white be consulted prior to specification. As a rule, fewer channels will provide a basic level of performance for budget conscious applications. Conversely, an increased number of channels, a wider CCT range, higher CRI and more precise color consistency may be more appropriate depending on the application and desired results.

### HOW TO SPECIFY

Select from the various channel/control options below and insert desired **Ordering Code** into the **COLOR TEMP** column of the Ordering Guide on page 1. No need to add a dimming option as the codes include the chosen protocol.
